

User Experience

1. Figure 1 shows a user login screen that allows users to enter an email address or phone number along with a password to access an existing account. The page also provides an option for users to create a new account. We appreciate the clean, uncluttered interface that the website employs, making it easy for users to navigate. However, we will implement a username feature for login, which will replace the email and mobile number functionality. This will keep login processes simple and consistent across all users

The image shows the Facebook login interface. At the top is the Facebook 'f' logo in a blue circle. Below it is a horizontal line. The text 'Log into Facebook' is centered. There are two input fields: the first is labeled 'Email or mobile number' and the second is labeled 'Password'. Below these fields is a blue 'Log in' button. Under the button is a link that says 'Forgot password?'. At the bottom is a link that says 'Create new account'.

Figure 1. Facebook login screen for existing users

2. Figure 2 shows the page where a user can create a new account. The information requested from a new user includes name, birthdate, gender, mobile number or email address, and password. We will retain the requirements for the user's name, birthdate, mobile number/email, and password. However, we will require users to enter their password twice to verify that the desired password has been entered correctly and without error, as shown in Figure 3. We will also retain the option for users to return to the login page from the account creation page.

Figure 3. Google page where a new user sets their password

- Figure 4 shows the page where an existing user can change their password. To change their password, users are required to enter their current password, their desired new password, and the new password a second time for verification. Requiring users to enter their password twice helps prevent an undesired password from being saved due to user error and ensures the user confirms the password is entered as desired and intended.

The screenshot shows the 'Change password' interface for a user named John Trimmer on Facebook. At the top, there is a back arrow and a close 'X' button. Below the user's name, the title 'Change password' is displayed, followed by a password requirement note: 'Your password must be at least 6 characters and should include a combination of numbers, letters and special characters (!\$@%).'. There are three input fields: 'Current password', 'New password', and 'Re-type new password'. Below these fields is a link for 'Forgot your password?'. A checkbox option is present for 'Log out of other devices. Choose this if someone else used your account.' At the bottom, there is a large blue button labeled 'Change password'.

Figure 4. Facebook page where existing users can update their passwords

- Figure 5 shows the page where an existing user can change their name. To submit a name change, the user is required to complete the “First name” and “Last name” fields, while the “Middle name” field can be left blank. Allowing users to omit a middle name is important for users who do not have one, while still requiring the first and last name ensures that a valid name is associated with the account.

The screenshot shows the 'Name' update interface on Facebook. It features a back arrow and a close 'X' button at the top. The title 'Name' is at the top of the form. There are three input fields: 'First name' (containing 'Sierra'), 'Middle name' (which is empty), and 'Last name' (containing 'Trimmer'). Below these fields, a note states: 'If you change your name, you can't change it again for 60 days. Don't add any unusual capitalization, punctuation, characters or random words. [Learn more](#)'. There is a section for 'Other names' with a sub-note: 'Other names are always public and help people find you on Facebook.' and a button labeled 'Manage other names'. At the bottom, there is a large blue button labeled 'Review change'.
